PROFESSIONAL SUMMARY

Backend-first, full-stack Software Engineer with hands-on experience building and shipping production-grade products end-to-end. Strong foundation in Node.js, TypeScript, and PostgreSQL with the range to own an entire product — from API design and database architecture to frontend delivery, deployment, and SEO. Proven experience integrating blockchain into live systems including on-chain/off-chain data flows, event indexing, crypto payment processing, and transaction handling. Recently architected and deployed a complete cross-border payment platform solo — covering fiat and crypto payments, 3-tier processing, referral/affiliate systems, security layers, and Cloudflare deployment. Open to fintech, Web3, and infrastructure-driven roles where performance, security, and real-world constraints matter.

TECHNICAL SKILLS

Languages & Runtimes: JavaScript • TypeScript • Node.js • HTML • CSS

Backend & APIs: REST API Design • Express.js • PostgreSQL • Database Architecture • Authentication & Security

Blockchain & Web3: Blockchain Integration • On-chain/Off-chain Data Flows • Event Indexing • Crypto Payment Processing • Transaction Handling

Payments & Fintech: Payment Gateway Integration • Fiat & Crypto Payments • 3-Tier Processing • Referral/Affiliate Systems

Infrastructure & Deployment: Cloudflare • SEO • Systems Design • Full-Stack Delivery • End-to-End Product Ownership

Other Skills (41 total on LinkedIn): Systems Design • Payment Gateways • Frontend Delivery • API Integration • Security Layers

KEY PROJECTS

CariPay — Cross-Border Payment Platform | Solo Build | caripay.app

2024 – Present

- Architected and deployed a complete full-stack payment platform entirely solo from scratch to production
- Supports card payments, crypto payments, cash withdrawals via code, and crypto-to-fiat conversion
- Implemented 3-tier payment processing, referral/affiliate system, and multi-layer security architecture
- Deployed on Cloudflare with full admin dashboard, transaction handling, and real-time payment flows
- Integrated blockchain for on-chain/off-chain data flows, event indexing, and crypto transaction processing

WORK EXPERIENCE

Software Engineer & Backend Developer | CariPay

2024 – Present

- Owns the entire product lifecycle — architecture, development, testing, deployment, and maintenance
- Built a production-grade fintech platform handling real fiat and cryptocurrency transactions
- Designed and implemented secure REST APIs with PostgreSQL database and TypeScript backend
- Integrated third-party payment gateways and blockchain protocols into a live, scalable system

Kids Coding Educator — YouTube Channel | Self-Directed / Online

2023 – Present

- Produces engaging video content teaching children HTML, CSS, and JavaScript fundamentals

- Demonstrates strong ability to break down complex technical concepts into simple, digestible content

EDUCATION

Higher National Diploma — Chemistry (Biochemistry OPT) | The Polytechnic, Ibadan, Nigeria
June 2011 – June 2013

National Diploma — Science Laboratory Technology | The Polytechnic, Ibadan, Nigeria
June 2007 – June 2010

WHAT I BRING TO YOUR TEAM

- Self-taught engineer who built and shipped a full fintech product solo — no bootcamp, no CS degree, pure execution
- Backend-first mindset with full-stack range — capable of owning an entire product from API to deployment
- Real-world blockchain and Web3 integration experience in production systems
- Based in Bangkok, Thailand — open to on-site, hybrid, and remote roles
- 500+ LinkedIn connections, 875 followers — active in the tech community

LANGUAGES & LOCATION

English: Fluent (Native proficiency) **Thai:** Basic

Currently based in Bangkok, Thailand. Available for remote, hybrid, or on-site roles in fintech, Web3, and infrastructure-driven products.
